# Welcome to Stovax

Stovax is a UK based company dedicated to the development of high quality stoves, fireplaces, flue systems and associated accessories. Stovax has grown over 38 years to become one of Europe's largest and most respected stove and fireplace manufacturers, constantly building on a reputation for superior craftsmanship, high quality materials, designer-led aesthetics and technical innovation.

The Stovax Group's prestigious product portfolio includes everything from the traditional to the ultra-contemporary in a wide array of styles and sizes, so whether your choice is solid fuel or gas, you can be sure to find a stove or fireplace from our range to add the perfect warmth and character to your home. Full details of Stovax's complete range of products can be found at [www.stovax.com](http://www.stovax.com).

The Stovax Professional XQ™ range is a comprehensive programme of twin wall flue pipe components alongside our vitreous enamel single wall flue pipe, ensuring there is everything you need to create your own complete flue system. Professional XQ™ offers unique benefits to both home owners and installers alike, and with a high level of customer service and support to match, making Stovax the natural choice for your professional chimney system, whether it is for a Stovax appliance or an alternative!

## Expert Retailer Network

We take great care to ensure that our stoves, fireplaces, flue systems and associated accessories are designed, tested and manufactured to the highest possible quality and safety standards. We are just as concerned to make certain that they are sold and installed correctly so that you enjoy years of pleasure from your purchase.

Accordingly, you will find that our products are only available from experienced, independent retailers who will be happy to show you a selection of models locally in their showrooms, often fully operational. These independent retailers will discuss your individual requirements both technical (such as sizing the heat output to your room and advising on your flue type) and design, and ensure that you select the most appropriate product for your home.

They will also be able to advise on or assist with the installation process as well as help provide any after-sales support and servicing your appliance may require in the future.

Whilst we encourage our retailers to promote fireplace products and their outlets via the internet, we do not believe suitable levels of customer care and satisfaction can be obtained from nationwide online sales and we would strongly recommend that you consider this when undertaking your research and making a purchasing decision. Furthermore, please be aware that we do not offer technical support (beyond our statutory responsibilities) to products bought via nationwide online sales, where this support would normally be offered by one of our qualified, independent retailers.

### 10 Year Extended Warranty

For complete peace of mind, the Stovax Professional XQ™ range carries up to 10 years of warranty. For further details please refer to page 30.

# Professional XQ™ Stove & Fireplace Chimney Systems

Incorporating 6 flue diameters from 125mm - 300mm, along with a complete range of fixings and accessories, Professional XQ™ can be configured to suit virtually any installation requirement. The chimney system offers not only water tight protection for the insulation within, but also protection during handling from cuts and abrasions that can be caused by normally sharp flue edges. The Professional XQ™ range with Twist-Lock connection, allows for quicker, easier and safer installation, with more versatility than other leading brands.

## Key Features

- Easy to install Twist-Lock system
- Weatherproof components
- Suitable for internal & external applications
- High density insulation
- Made from high grade stainless steel
  - 316L stainless steel inner wall for the highest corrosion resistance
  - 304L stainless steel outer wall in an attractive, polished finish
- Innovative decorative components
- All components are available in a wide range of colours

## Range of Colour Options

With over 450 colour choices all external components in the Professional XQ™ range can be powder coated to virtually any colour of your choice.\* This enables you to match any requirements that may have been set by local planning authorities or to any specific aesthetic requirements you may have of your own. We also offer heat resistant textured matt black finish, recommended for internal use only which can be installed right down to your stove or fireplace.

\* Can be colour matched to any RAL colour. Please note: the textured Matt Black powder finish is recommended for internal applications only. It has a rated heat resistance up to 500°C and can safely be used right down to the stove. RAL colours used on external applications are rated up to 200°C and are therefore not suitable for use near the stove.

## XQ FlueDesigner™ App (for Specifiers)

Stovax has developed an easy to use app that can generate a specification and drawing for your Professional XQ™ installation on iOS and Android mobile devices. Exclusively designed for use by Stovax's network of independent retailers and specifiers, this handy tool provides a drawing, component list, quotation and more based upon the information provided about the installation. For further details, please see page 25.

Stovax Elise 540 Cassette Fire with Edge+ frame

## Quality Assured

The Professional XQ™ range is tested, approved and CE Marked to BS EN 1856-1: 2009 as required under the Construction Products Regulation and administered by BSI with the following designation:

BS EN 1856-1 T450 N1 D Vm L50050 G50

Tested and approved under all the requirements of BS EN 1856-1:2009 including clause NA.5; compliance with all the relevant fire rating requirements for stability and integrity under BS476-20:1987, and the general requirements of BS EN 1443:2003 for chimneys.

Stovax Professional XQ™ has HETAS Approval.

All twin wall components are made from 0.5mm thick, high grade stainless steel and are corrosion and sootfire resistant, with a minimum distance to combustible materials of 50mm.

# INTERNAL INSTALLATION

Rain cowl  
(see page 19)

Storm collar  
(see page 18)

Flashing  
(see pages 16 - 18)

Vaulted Rafter Support  
(see page 7)

Elbow  
(see page 7)

Flue Enclosure  
(see page 14)

Floor & Ceiling Ventilated  
Plate & Shield  
(see page 14)

Straight lengths  
(see page 6)

Enamelled flue pipe  
(see pages 20 - 22)

Stovax offers 4 standard powder coating colours. For internal twin wall components, Textured Matt Black; and for external components, Satin Black, Gloss Black and Satin White. However, all external parts can be powder coated to any colour in the RAL range. For example:

**RAL** RAL is a European colour matching system mainly used for paint and powder coating.

## Innovative Decorative Solutions

### Decorative single to twin adaptor

This component allows a cut length of vitreous flue pipe to be inserted up to 90mm into a twin wall system to give a completely seamless join (see page 10).

### Decorative ceiling cover plate

This component is supplied powder coated white to give a perfect finish to the system when passing through a ceiling. Secured by magnets, it is designed to fit beneath floor and ceiling vented and non-vented shields, showing no visible fixings (see page 15).

# THROUGH WALL INSTALLATION

Straight enamelled flue pipe, elbows and Tee-pieces are available in the two colour options below.

Matt Black

Ivory

## Innovative Technical Solutions

### Extendable Wall bracket

Allowing an adjustment of 50 – 80mm from the wall, the bracket's outer facing flange and captive nuts facilitate a straight forward and quick installation. (see page 11)

### Captive Nuts

Where relevant, Professional XQ components feature captive nuts. These offer easier single-handed installation and contribute to increased installer safety whilst working at height.

# STRAIGHT PIPES

## Straight lengths

Available in 6 lengths which can be easily combined to achieve the required height for the installation. Each joint is firmly secured with our Twist-Lock system and included locking band. All lengths must be installed with the male socket pointing upwards. Outside diameter is 50.5mm greater than the inside diameter.

Ø200mm	FXQ200-019

# STARTER COMPONENTS/ADAPTORS

## Single to twin adaptor

Use this adaptor to join single wall, Enamelled flue pipe to your twin wall system. Both the single and twin wall flue pipe must be of the same diameter to use this product. This part is secured using the Twist-Lock system and included locking band. **This adaptor should not be installed directly into an appliance.**

		ØA	ØB	L
Ø125mm	FXQ125-020	125mm	119mm	106mm
Ø150mm	FXQ150-020	150mm	144mm	106mm
Ø175mm	FXQ175-020	175mm	172mm	106mm
Ø200mm	FXQ200-020	200mm	194mm	106mm
Ø250mm	FXQ250-020	250mm	248mm	106mm
Ø300mm	FXQ300-020	300mm	298mm	106mm

## Single to twin increaser

This allows you to join a 125mm, 150mm or 175mm single wall, Enamelled flue pipe to a larger 150mm, 175mm or 200mm twin wall application. This part is secured using the Twist-Lock system and included locking band. **This should not be installed directly into the appliance.**

		ØA	ØB	L

Ø200mm	FXQ200-022	200mm	212mm	100mm

# STARTER COMPONENTS/ADAPTORS

## Flexible liner to twin adaptor

including anchor plate

This adaptor includes the addition of an anchor plate which can act as a load bearing support for the system. The single "sleeve" below the anchor plate allows for a flexible liner to be fitted over the top and fixed using self-tapping screws and "jubilee clip" to clamp liner to sleeve.

		ØA	ØB	C	L
Ø125mm	FXQ125-022AP	125mm	126mm	350mm	160mm
Ø150mm	FXQ150-022AP	150mm	151mm	350mm	160mm

# SUPPORT ACCESSORIES

## Adjustable wall sleeve

This is 50mm larger than the external diameter of the pipe and provides protection for the installation when passing through a non-combustible wall. There is no need to cut this sleeve to fit as its length can be easily adjusted and secured using self tapping screws and then taped.

		ØA	B

Ø300mm	FXQ300-033	400mm	200mm - 380mm

ØA measurements are approximate.

## Roof bracing kit

This is required to support flue lengths above 2m on 125mm and 150mm diameters or 1.5m on other diameters. This is subject to specific design installation, please consult the appropriate instructions. Structural locking bands should also be used where applicable

## Guy wire kit

Designed to be an alternative to the roof bracing kit (above) which offers a maximum span of 2.6m. the guy wire kit can reach in excess of 3m from the flue support to offer greater installation flexibility. The kit comprises 6 eyelets, 3 lengths of wire, 3 tensioning brackets, anchor clips and other components to facilitate installation of this kit. Please note a Support Bracket (above) is also required.

## Locking bands & structural locking bands

The locking band has a simple spring connection system and is supplied with every component that has a male socket. Structural locking bands can be used to replace standard locking bands throughout the system. They are required for added support for lengths of flue in excess of 3 meters long, however where above roof level additional bracing may be required. They should also be used with elbows to provide extra support when used around the eaves of a property.

## Base & intermediate wall support plate & brackets

Generally used for external applications. When used with the base socket/spigot plate (below) this acts as a base support for the system. With the addition of the support bracket (below) this can also provide an intermediate support anywhere along the length of the system. A Base Wall Support and Spigot assembly is also available for support with a 135° Tee.

# FLUE ENCLOSURE

## Flue enclosure including fixings

To meet building regulations, the flue system must be boxed in or properly enclosed in the loft. This is in order to avoid combustible materials falling against the outer skin of the flue or being placed too close to it.

		A	ØB
FXQ-080S	125 - 175mm I/D Flue pipe) Flue enclosure: comprises two halves and nine brackets.	1000mm	338mm

# CHIMNEY SAFETY DATA PLATE

The Chimney Safety Data Plate can be used to permanently record the flue registration and its technical specification thus complying with Building Regulations ADJ that any chimney or appliance installation must have a notice plate fixed in a visible position. Possible locations are within the fireplace or adjacent to the electricity meter, or next to the mains water stop valve.

FXQ-081 Chimney Safety Data Plate

Cowls are fitted to the end of the flue pipe and secured using our Twist-Lock system to provide complete protection for the installation.

# KEY TECHNICAL BENEFITS

Stovax is at the forefront of design and technological advancement within the heating industry, and the innovative Professional XQ™ range is testament to our commitment to constant improvement and development. With a host of expertly designed key features, you can trust Stovax to provide your complete fireplace and chimney solution.

## Key Technical Benefits

- **Weather Proof and Fully Sealed Components**

With fully sealed components, the Stovax Professional XQ™ System can be installed in all weather conditions. Unlike some other systems, the inner insulation is protected by formed stainless steel. This will also protect the installer from the risk of abrasions or cuts from sharp flue edges.

- **Easy to Install Twist-Lock System**

All Stovax Professional XQ™ components incorporate a Twist-Lock system designed to allow an easy and rapid installation of your chimney system. When used with other Professional XQ™ support components, this joint will support up to 2m from the last support.

- **Locking Bands Included**

Unlike some other chimney systems, all Professional XQ™ components are supplied with an appropriate number of locking bands as standard.

- **Decorative Single to Twin Adaptor/Increaser**

This adaptor is a decorative component designed to improve the connection between single skin enamelled flue pipe and the Professional XQ™ Chimney System. The single skin enamelled flue pipe can be inserted into the adaptor by up to 90mm to give a completely seamless join. For total flexibility, Stovax offers the Decorative Increaser when you wish to connect 125mm single skin vitreous to a 150mm Stovax Professional XQ™ System.

- **Extended 135° Tee Piece**

The Extended 135° Tee features a 750mm tough-wall section which allows for a joint free connection. There is also a standard tee cap included for easy inspection and sweeping.

- **Ceiling Cover Plate**

The Ceiling Cover plate is an innovative component designed to eradicate the issue of unsightly ventilated fire plates. In an attractive powder coated white with invisible fixings, it can be used to cover the ventilated plate\*, whilst still complying with the BSRIA standards for these components.

- **Base Socket/Spigot Plate**

With the extra support provided by the Professional XQ™ Twist-Lock System, the Base Socket/Spigot Plate can support up to 12m of Chimney System when combined with the Base Wall Support Plate and Brackets.

- **Roof Support**

Robust and secure, the Roof Support can support the weight of up to 9m of your flue system. This component stabilises your installation down to 6m below the support and up to 3m above it. However, if the system does extend more than 3m vertically you will require the lateral support of the Roof Bracing Kit.

- **Adjustable Flue Length**

To provide complete system versatility, each adjustable flue length offers you a variation of up to 360mm in height. Additional insulation is provided to fill the extra flue height created, and must be fitted in accordance with the installation instructions.

\*Ventilated Plates are required when either passing through a combustible ceiling or floor void, or when a system is to be fully enclosed.

When you purchase a Stovax Professional XQ™ Chimney System from one of our approved independent retailers you are buying into a network of unsurpassed support and expertise. Not only can you be sure that you are getting the highest quality components and products, but you will also receive the highest level of customer care.

## Dedicated Service & FlueDesigner™ App

- **Committed Customer Service**

As a member of our expert network, your Stovax retailer will be able to answer any questions you may have about your home heating and chimney requirements. Backed up by our own friendly Customer Service teams, you can get all the help you need in selecting the system that is right for you.

- **Dedicated Technical Support Team**

Our network of independent retailers and specifiers have access to our dedicated, HETAS registered Professional XQ™ Technical Support team. All of the team are expertly trained and on hand to offer comprehensive advice and practical telephone assistance both onsite and off.

- **Professional XQ™ 'FlueDesigner™' App**

To further simplify your installation, Stovax has created a bespoke app for iOS and Android mobile devices that will design your Professional XQ™ system, giving guidance on everything you need from your stove to the rain cowl\*. Created for the exclusive use of our independent retailers and specifiers, this easy-to-use app will generate a guideline specification, including a diagrammatic drawing, bill of materials, component list and quotation all based upon the information you provide regarding the installation.

**The Professional XQ™ FlueDesigner™ app is a handy, time saving tool for retailers and specifiers:**

- Covers a variety of installation types including house, bungalow, barn conversion and vaulted ceiling properties
- Comprehensive, diagrammatic drawing of your installation
- List of components needed for your flue system
- Bill of Materials and quotation
- Instant online ordering
- Optimised for Android and iOS devices
- Desktop synchronisation
- FlueDesigner™ technical support

The FlueDesigner™ app joins a host of other benefits that have all been designed to make your chimney system specification and installation as simple as possible.

Our passionate approach to the quality design and complete reliability of all our products shines through in our innovative chimney systems range. Make the quality choice when it comes to your system selection, make it Stovax Professional XQ™.

\* Please note that the Professional XQ™ FlueDesigner™ app should be used as a quotation and installation guide, and in no way should be deemed a substitute for a full site survey.

\*\* Based on the input of accurate site survey measurements and requirements.

## General installation instructions

You are advised to have your intended installation checked and surveyed by an appropriately qualified person. In the UK this would be a HETAS chimney specialist for solid fuel systems or GasSafe registered member for gas systems. They will also be able to complete your installation in accordance with the current local building regulations.

For further guidance on installation issues that are not already detailed within the Professional XQ™ Chimney Systems Installation Instructions, you can contact one of the following:

- HETAS (Heating Equipment Testing and Approval Scheme)
- NACS (National Association of Chimney Sweeps)
- Manufacturer's installation instructions for the heating appliance.

Further checks by your installer will be required to ensure that an adequate air supply is available for combustion and it is essential these checks are carried out prior to installation.

It is important that you have fully designed your system and read all the relevant instructions and local building regulations and taken expert advice before commencing installation.

In particular you will need to ensure the installer has checked all local regulations, including those referring to national and European standards, to ensure full compliance of your installation.

## INTERNAL INSTALLATION FOR SINGLE STOREY BUILDING

## General installation instructions

Below is a summary of the General Installation Instructions. Please note that this is not a substitute for reading the full Stovax Professional XQ™ Chimney Systems Installation Instructions which can be downloaded from [www.stovax.com/chimneysystems](http://www.stovax.com/chimneysystems).

1. The minimum distance for the Stovax Professional XQ™ Chimney System to combustibile materials is 50mm. Please ensure that this distance is maintained at all times.
2. In attic or loft spaces, use our flue enclosure (FXQ-080) to prevent any contact with combustibile materials and ensure that no additional insulation materials are placed around the flue.
3. When designing your system you should consider the following:
  - The internal diameter of the flue system should not be less than the size specified by the appliance manufacturer.
  - The minimum recommended height for any solid fuel flue system should be 4.5m from the top of the appliance.
  - The roof terminal position must conform to building regulations.
  - No joint should occur within any floor, ceiling or wall space.
  - Where the system passes through a floor or ceiling space, shielding must be fitted to maintain clearances to combustibile materials.

For example:

Through the wall (see page 12 for details)

Adjustable wall sleeve

Through the ceiling (see page 14 for details)

Floor & ceiling ventilated plate & shield

Floor & ceiling non-ventilated plate & shield

- The connection to the twin wall system should be in the same room as the appliance.
  - The system should be fully supported along its full length.
  - Provision should be made to inspect and clean the flue.
4. Each joint is secured by locating the female socket over the male socket and twisting until tight and secure. The included locking band should then be placed over the joint and fastened to secure the length. All lengths must be installed with the male socket pointing upwards.
  5. A chimney data plate must be attached, as detailed in Approved Document J of the UK Building Regulations.
  6. The finished system should be commissioned as detailed in the installation instructions, and any significant faults rectified before the system is used with a fitted appliance.
  7. The textured Matt Black powder finish is suitable for internal applications only. It has a rated heat resistance up to 500°C and can safely be used right down to the stove. RAL colours used on external applications are rated up to 200°C and are therefore not suitable for use near the stove.
  8. The points listed on this page are only a guide to the correct installation of the Stovax Professional XQ™ flue system. For full installation details refer to the relevant sections throughout our installation manual along with the requirements of the UK Building Regulations, and any local regulations and working practices that may apply. Please see legal requirements on page 30 for further details.

Before installation of this product, please read the Stovax Professional XQ™ Chimney Systems Installation Instructions fully and any relevant building regulations.

## Elbow Offset Chart

Elbows may be used in pairs to provide an offset in the flue system to avoid cutting joists and clear other obstructions. All offsets should be supported from above and below with the appropriate support component. No more than ONE offset can be in the chimney (not including the connection to the appliance). The length of the chimney between the elbows MUST NOT exceed 20% of the total vertical length of the chimney.

The dimensions of various offset combinations are listed below that follows the diagram to the right.

# SITE REQUIREMENTS

## Flue Outlet Positions

Point where the flue passes through weather surface (Notes 1 & 2)		Clearances to flue outlet
A	At or within 600mm of the ridge	At least 600mm above ridge
B	Elsewhere on roof (whether pitched or flat)	At least 2300mm horizontally from the nearest point on the weather surface and: a) at least 1000mm above highest point of intersection of the chimney and the weather surface; or b) at least as high as the ridge
C	Below (on a pitched roof) or within 2300mm horizontally to openable rooflight, dormer window, or other opening (Note 3)	At least 1000mm above the top of opening
D	Within 2300mm of an adjoining or adjacent building, whether or not beyond the boundary (Note 3)	At least 600mm above any part of the adjacent of building within 2300mm

1) The weather surface is the building external surface, such as it's roof tiles or external walls.

2) A flat roof has a pitch less than 10°.

3) The clearance given for A or B, as appropriate, will also apply.

4) A vertical flue fixed to an outside wall should be treated as equivalent to an inside flue emerging at the nearest edge of the roof.

## Twist-Lock System

Each component in the Professional XQ™ range features our Twist-Lock system for complete ease of installation.

Simply locate the female socket over the male and twist until tight and secure. The included locking band should then be placed over the joint and fastened to secure the length. This easy-to-use system protects the installation against accidental uncoupling, giving complete peace of mind with your Professional XQ™ Chimney System.

# IMPORTANT INFORMATION

## Legal requirements for installation

All UK installations must conform to UK Building Regulations (England & Wales Document J/Scotland Part F/Northern Ireland Part L). For installations outside of the UK, you must check and conform to the relevant building regulations and national standards pursuant in that country.

All national building regulations and standards, along with any local regulations and working practices must be adhered to. Should any conflict occur between these instructions and the regulations then the regulations must take priority.

This brochure provides only basic guidance. The Stovax Professional XQ™ Chimney System should be installed by a competent person or approved by your local building officer. This brochure is not definitive and needs to be read and followed in conjunction with your local building regulations and other specific requirements and guidelines covering electrical, gas, solid fuel and multi-fuel appliances; as well as the full Stovax Professional XQ™ Chimney Systems Installation Instructions. When completing

the installation and building works, you should comply with your responsibilities under the Health & Safety at Work acts and any new regulations that may have been introduced during the lifetime of this brochure.

Particular attention should be drawn to:

- 1) **Handling** - The flue system may be heavy. Adequate facilities must be available for loading, unloading and handling.
- 2) **Asbestos** - This flue system contains no asbestos. If there is a possibility of disturbing any asbestos in the course of installation, please seek specialist guidance and use appropriate equipment.
- 3) **Metal Parts** - Take care when installing or servicing the flue to avoid personal injury.
- 4) **Access** - Ensure suitable and safe access is available when working at height and on roof areas.

A faulty installation can cause danger to the inhabitants and structure of the building.

## Product Technical Specifications

The products are manufactured using:

- 0.5mm 316 grade stainless steel for the inner liners.
  - 0.5mm 304 grade stainless steel for the outer liners.
- (Both liners are fully seam welded and polished)

The cavity is insulated with 25mm ceramic mineral wool.

External diameter of flue pipe	
FXQ125	175mm
FXQ150	200mm
FXQ200	250mm
FXQ250	300mm
FXQ300	350mm

The textured Matt Black powder finish is recommended for internal applications only. It has a rated heat resistance up to 500°C and can safely be used right down to the stove. RAL colours used on external applications are rated up to 200°C and are therefore not suitable for use near the stove.

## 10 Year Extended Warranty

The Stovax Professional XQ™ range carries an extensive conditional warranty for complete peace of mind. The Stovax Professional XQ™ warranty covers any defect due to faulty manufacture provided that the system has been correctly specified, installed, used & maintained in accordance with the Installation and User Instructions. It includes a 10 Year Extended Warranty on twin wall components; 2 years on powder coated twin wall, single wall flue pipe and cowls and accessories as well as 1 year on lead flashings.

To maintain the warranty on your Chimney System, you must have your chimney system swept annually by an approved chimney sweep and a signed record of this needs to be maintained. In the case of solid fuel installations, your Stovax chimney system must only be used with fuels approved and specified by either HETAS or the Solid Fuel Association. Any other fuels will invalidate this warranty. Any chimney fire will also invalidate the warranty and it is always advisable to replace the system following a chimney fire.

To receive your Extended Warranty, your chimney system must have been purchased from an authorised retailer and registered with Stovax. For full details including other factors affecting the 10 Year Extended Warranty, please visit [www.stovax.com/chimneysystems](http://www.stovax.com/chimneysystems).
